

Double Palms Pool Service Newsletter

Friday, August 1, 2014

Welcome to the Double Palms team!
We look forward to keeping your pool sparkling clean!

Dirty Filters Can Make You Sick!

If a filter is not regularly cleaned, it will get clogged. This means that any debris that goes through the filter will end up back in the pool. Other problems you can face from a poorly maintained pool filter: an algae bloom, the pool cleaner not working sufficiently, and a burnt out pump motor. Filters should be cleaned at least twice a year, once in the spring and once in the fall.

Schedule a filter clean today!

Make Sure You Are Running Your Pump Long Enough!

To ensure your pool is clean and ready to use, you need to make sure you are running your pump long enough each day. The amount of time needed to run your pump depends on the size of the pool, the type of pump you have and the season and weather.

Be sure to consult with your pool tech to figure out the right amount of time for your specific pool.

Don't Be Fooled!

Clean looking pools still need regular testing and maintenance! Just because it looks clean doesn't necessarily mean it is safe. And if it is clean and safe, we want to keep it that way!

Refer a friend and you'll have a chance to get \$50!

Have your friend mention your name and you can get either a \$50 gift card or \$50 off your next month's service!
